BEST NEW
ANTI-ACNE BB CREAM

SLOANE INC. S7.4 Anti-Acne BB Cream

Undoubtedly the most popular Korean export to jazz up our lives in recent years, BB Cream is now a makeup staple. For those with oily skin, BB Cream is even more of a godsend. This not only gives skin a radiant, silky finish, but provides broad-spectrum UV protection of SPF25 - so there's no need for greasy sunblocks that clog pores and trigger break-outs. Now, Sloane Inc. goes a step further by infusing anti-acne ingredients into this multi-tasker. Its Anti-Acne BB Cream contains azelaic and salicylic acid to ward off oil slicks and pimples without irritating skin. Azelaic acid helps unblock pores and kills acne-causing bacteria, while salicylic acid encourages the shedding of dead skin cells. The cream-to-powder, mineral-based formula is suitable for both clogged-prone or sensitive skin, mops up excess shine and delivers a matte finish.
