

PRETTY PAINLESS

It's finally here—painless light-based therapy that offers safe and faster treatment for sun-damaged and ageing skin. PPx therapy uses pneumatic energy and broadband light to deliver energy efficiently to problem areas. It's targeted at skin problems like pigmentation, broken capillaries, unsightly veins and hair removal. Topical numbing agents aren't needed and side effects such as redness, burning, and scarring are minimised. It's also more hygienic: personalised and customised single-use disposable tips are used. There's no downtime so patients can resume normal activities immediately. *At The Sloane Clinic, Jalan Merah Saga, Chip Bee Gardens #01-66, 6471-1108, www.sloaneclinic.com*
