

HAIR/BEAUTY FEATURE

LASER QUEST

Whether you're worried about fine wrinkles, freckles, acne or a nasty scar, a little bit of laser can go a long way. Sometimes, though, the names of various laser treatments can be bewildering, sounding more like a catalogue of new planets discovered in a far-flung galaxy than something that can help smooth your skin. Here, then, is a roundup of such treatments available in Singapore, so you can always tell your Spectra from your Mighty Titan.

Nova 3R

What is it?
Nova 3R uses a non-fractional infrared broadband light to target a multitude of skin concerns. The first step involves the tightening of the skin with gentle, painless infrared spectrum. The second step involves removal of skin pigments and discoloration with intense pulsed light spectrum. The final step involves stimulation of cells with photobiomodulation, resulting in brighter skin and smaller pores.

What makes it special?
Nova 3R is a multi-tasking FDA-approved treatment from Geneva, Switzerland, that uses triple wavelengths of light energy to deliver three beauty fixes in a single session.

Why do we like it?
The three-in-one treatment lightens pigmentation and broken capillaries, brightens dull complexion and revitalises tired skin at the same time. There's no downtime; you can even apply makeup to the area immediately after and continue with normal activities.

Who is it for?
Anyone with pigmentation (freckles, brown spots, age spots), broken capillaries, enlarged pores, wrinkles, saggy dull skin, acne and acne marks will benefit.

How long does it take?
About 45 minutes per session. Depending on your skin condition, about three to six sessions are required.

What does it cost?
\$1,100 per session or \$5,500 for six sessions.
