When choosing a dermatologist, it is important to check her credentials with the Singapore Dermatological Society. It takes five to six years of training to be listed, so whenever these dermatologists get fully qualified, they should also ask your friends for recommendations, as word-of-mouth is usually a trustworthy method. Don't feel too timid to meet your potential dermatologist before deciding if you are comfortable with them.

**Priscilla Yuen, consulting dermatologist,
Silo Specialized Practice**

It will be shown that attaining a great youthful anti-aging method. It releases hormone DHEA that is believed to keep skin and hair youthful, and increases collagen metabolism, and its production is boosted as you age. Although there are a number of other regimens, I recommend this product when you have to face the "time" skin a month to reverse the wrinkles and get glowing skin!"

Kaiki, make-up artist

I discovered to test spa Ruelle Minaka when she was a child. "I used traditional natural methods, so my post-pregnancy weight gain was not a problem. Now it's weather the day I know what has her best thing when it comes to anti-aging products. "The more you get stressed, the more you lose weight. So, if you get with the flow, I also run a spa and give you a lot of great natural products, especially heat stone or face."

"Toothpaste on pimples works like a dream. I also visit The Sloane Clinic for regular facial treatments. Beauty, for me, is all about being centred, and having love and happiness."

Fly Entertainment artiste**

Never lose the foundation on your hands. Test it on the forehead before the top of the forehead. You may look like the area where your skin is thinnest from the exposure. I don't believe in using just one shade. Use a colour that's one shade lighter than the original and another darker shade for contouring and shading before applying the sun off with translucent powder. I find this creates the most natural-looking results."

**Veronica Bravara,
make-up artist**

"The best place to wear a perfume is on the inside of the wrist. The air of the elbow behind the wrist, at the base of the knee, and the hair. The perfume should be applied to the inside of the wrist, which is the most sensitive area of the body. These areas are covered by fresh heat, which makes the scent to diffuse gradually into the air."

"Humidity is the enemy of hair volume. To keep your hairstyle from going flat, it's probably best to stay inkers because with our local climate, most hairstyles will still go flat, no matter what you put in it."
Edwin Chew, leading stylist, Casey Inc

"A major mistake that most women make is using too many skincare products. I have patients who apply eight to 10 layers of skincare both day and night. Obviously, not everything gets absorbed, so a lot of it just sits on top. I use less than four products every day, including a cleanser, a toner and a sunblock. I also believe less make-up is best."

"Toothpaste on pimples works like a dream. I also visit The Sloane Clinic for regular facial treatments. Beauty, for me, is all about being centred, and having love and happiness."
